Chicago, IL 60601

Dear Ms. Kaiser:

Enclosed with this letter are the latest analytical results for ground water monitoring wells MW-7 and MW-8 at the Granville Solvents Site, Granville, Ohio. The samples were taken on August 5, 1993.

The only positive result is a concentration of 25 ug/l of total 1,2 dichloroethene (1,2 DCE) detected in MW-8. MW-8 is located approximately 400 feet east of the Granville water supply wells. This is the second consecutive positive result for 1,2 DCE at this location; therefore, we believe the contaminant plume has migrated beyond this point and is moving toward the well field.

Please keep me informed as to the progress in scoring this site for listing on the National Priorities List. If you have any questions, please contact me at (614) 771-7505.

Sincerely

Fred Myers  
Site Coordinator
